One platform / multiple workflows

Choose the workflow that fits your goals.

Employers & Recruiters

Find relevant opportunities for consultants, review matches, and manage requirements and RTR activity. Bench sales is one supported workflow.

Education & placement teams

Match students to opportunities, identify skill gaps, and track placement progress with configurable student, cohort, and advisor labels.

Individual job seekers

Compare your profile with target roles, understand skill gaps, and track your applications in a personal pipeline.

Contact us about access and plan options for your use case. Published team pricing and the founding offer apply to staffing teams.

Use case / IT staffing & C2C

Less searching. More time for the next submission.

Instead of switching between vendor emails, job boards, and consultant profiles, give your team one connected matching workflow.

JobSeam brings together requirements from your connected mailbox and jobs from supported sources and markets. Your rep reviews the match before taking action.

1. Requirements arrive in your connected mailbox
2. JobSeam structures the requirement
3. Consultants are scored against the role
4. Your rep reviews ranked matches and skill gaps
5. Send a Right-to-Represent request and track activity

Talent matching & opportunity workflows

Your bench and your requirements, working together.

01 / FIND

Start with either side of the match.

Find consultants for a requirement, or relevant requirements for a consultant. Two-way matching is included in every plan.

02 / UNDERSTAND

Review the reason behind the score.

Compare exact and related skills, review gaps, and use resume parsing to turn consultant profiles into structured information.

03 / ACT

Move the conversation forward.

Use the RTR workflow and activity history to keep track of submissions and follow-ups across your team.

Start with an assisted setup

Staffing plans for different team sizes.

Monthly team plans start at $199; annual prepayment starts at $1,990. The founding offer is for the first 5 staffing companies: 5 users, 100 consultants, 1 mailbox, and US coverage. Price locked for 12 months. No setup fee for standard onboarding.

Compliance operations

From LCA preparation to a reviewed public file.

Organize evidence, draft documents, and review decisions in one workspace. Your team controls the facts and the release of public documents.

Compliance in workflow order

Move from LCA preparation and notice records through petition tracking, I-9/E-Verify, ongoing review, PAF documents, and candidate activity. Unsaved entries stay in place when you switch stages.

LCA posting & worksite records

Keep multiple LCA records per consultant. Capture worksite addresses, notice methods, posting dates and locations, evidence, certification dates, and employee delivery/receipt records. Calendar-day counts and date checks flag items for human review.

OPT & STEM OPT records

Track OPT and STEM OPT authorization dates, recorded unemployment periods and totals, I-983 status, reporting checkpoints, and worker documents. Review overdue checkpoints and records expiring within 60 days. This is record tracking; it does not generate or sign Form I-983, submit to SEVIS, or determine work authorization.

12 PAF document templates

Generate 12 review templates individually or together as a ZIP, with PDF as the default and editable Word output available. Includes cover/checklist, rate of pay, prevailing-wage source, notice, posting acknowledgment, benefits, actual-wage methodology, optional duties, and conditional employer documents. Attach the certified LCA and original evidence separately. Employee LCA receipts remain separate private worker records.

Reviewed public PAF pages

Company administrators can explicitly publish reviewed PDFs to an employer-specific Public Access File page that visitors can open without an account. Withdraw access when needed. Candidate profiles, private notes, payroll records, and petitions stay outside the public page.

Compliance Reference library

Open PAF checklists, access and retention guidance, workflow instructions, and official DOL/eCFR links from the System menu. Flag discrepancies through Ideas or contact support with the source details.

Room to review the details

Move and resize application dialogs, maximize for detailed review, or restore/reset the window. Close controls honor supported unsaved-change checks so a layout change does not discard your entries.

Generated drafts are unsigned and private. Public release requires a separate administrator review of a PDF. JobSeam does not file LCAs or H-1B petitions, certify compliance, or replace legal review and required inspection arrangements. Modules are enabled for your team during onboarding.
